New products launched at exhibition

PAN Mixers South Africa (PMSA) used the Totally Concrete 2015 exhibition to showcase its range of products. Apart from being the leader in Africa in terms of brick and block making machinery, PMSA also distributes the latest innovative technology from international companies such as Fiori of Italy, Kraft Curing Systems of Germany and ABECE and HTC of Sweden.

PMSA used the exhibition to launch new products such as the Fiori DBX35 self-loading concrete mixer and the new SPS range of roof-tile machinery. The SPS semi-automatic extruder can manufacture up to 5 000 concrete tiles in a nine-hour shift.

This equates to about ten tiles a minute, depending on the specific plant configuration. The main benefits of SPS range of roof-tile equipment is that it is easy

to install, operate and maintain, which are important considerations in remote project sites in Africa.

Ever mindful of the requirements of its customers to improve quality and reduce costs, the Fiori DBX35 fills a gap in the local market for an affordable and reliable self-loading concrete mixer. A major benefit of the Fiori DBX35 is that it offers accurate measurement without the need for additional equipment.

"It is the ideal self-loading mixer for the price-conscious customer, and therefore I am confident it will be a notable success across Sub-Saharan Africa," comments Quintin Booysen, marketing and sales manager at PMSA.
