

PMSA adds colour to the concrete industry

Local concrete product manufacturers and specialised ready-mix suppliers learned more about pigments and advanced colour metering systems for the production of concrete precast stones, pavers, blocks, roof tiles and ready-mix concrete, at a specialised seminar hosted recently by Pan Mixers South Africa (PMSA).

The seminar was conducted by Michael Finke, managing director of the internationally renowned German company, Finke Dosiertechnik, who boasts 25 years of industry experience. Finke Dosiertechnik is a pioneer in powder pigment dispensing technology and is the global leader in pneumatic powder pigment metering systems. The company manufactures a variety of products for use in the concrete industry, including: systems for powder pigment metering, granule metering systems, slurry metering systems and admixture scales.

The seminar covered a variety of topics, bringing new insight to the local concrete market. Topics included: pigment supply forms; global market views and trends; colour system comparisons; the universal system and its advantages; as well as additive metering of pigments.

Quintin Booyesen, sales and marketing manager of PMSA – the largest supplier of concrete brick, block and paving making machinery and technology in Africa – noted that this event was staged as part of the company's ongoing commitment to provide value-added offerings to its client base and industry.

"Finke Dosiertechnik is highly respected globally for its innovative solutions for dosing and dispensing of granular pigments, liquid pigments, chemical admixtures and other materials. Those who attended this industry-specific seminar certainly gained a global perspective of advanced technology, making them more competitive in their various fields," said Booyesen. ■
