

4x4 mixer in action

The machine is suited to the remote and rugged environments where the company often works.

One of the new Merlo DBM 2500 mixers owned by Sanyati Holdings is being used by its telecommunications division in the erection of cellular communications masts. "The Merlo has performed superbly, especially in light of the fact that we are working on very steep inclines on our current project," Alan Ross, plant manager for Sanyati, says. Ross is impressed with the 4x4 capabilities of the machines which make them ideal candidates for the remote and rugged environments in which the company often works.

"The Merlos are very durable and mobile which is important for our work focus and the 2,5 m³ capacity is perfect for the specialised work we do in the road building, telecommunications, mining and railway sectors."

Readers will recall our recent announcement of Fiori's entrance into the market via Pan Mixers as agent. It was actually first introduced to the country by Franki Africa.

Also keep your ears to the ground for Carmix and D'Avino which are both keen to enter the market.
