

Concrete Mixers – Self Loading – Self mixing – Self Propelled

Choosing the Fiori self-propelled mixing systems will allow you to build with time and cost saving.

Producing concrete on site means being independent, flexible and competitive in urbanisation and civil engineering works.

Above all, it allows keeping the quality of the mix under control for greater safety, larger saving in terms of direct production costs, and to use the concrete at the exact moment it is required on site also varying the types and dosages.

Starting a new business?
Contact PMSA for support.

PMSA is Africa's largest manufacturer of a full range of concrete brick, block and paver machines, including the Comet, Uni and RE 600 models. These are ideally suited for start-up businesses and rural affordable housing projects.
