

Steel merchant streamlines efficiencies for local industry

Recently-formed steel merchant TWR Steel has entered into a preferential supply agreement with Pan Mixers South Africa (PMSA), which supplies concrete brick, block and paving-making machinery and technology in Africa.

The TWR factory in Boksburg

PMSA has hence improved control over the supply chain of its critical steel parts.

TWR Steel is based in Boksburg, South Africa, and operates a 2 800 m² manufacturing facility and 570 m² of office space. It is a wholly-independent company that serves as a preferential supplier of steel products to PMSA, which are used by the company for the manufacture of equipment components.

TWR Steel sets itself apart from the competition by specifically-focusing on improving the predominantly prolonged and delayed service delivery periods that currently dominate the local steel market.
