Block-making machine impresses

Production rates have increased and a customer base has been widened with a block-making machine in Mpumalanga, South Africa.

Nkomazi Bricks is becoming a leader in the manufacture of concrete bricks and blocks with a machine supplied by Pan Mixers South Africa (PMSA). Ted Repinga, general manager of Nkomazi Bricks, says: "Nkomazi Bricks selected PMSA as its equipment supplier of choice as the company has a well-established geographical footprint, and an excellent reputation for providing high-quality equipment and competitive prices. The RE600 block-making machine has proven to be so successful for the company that we are in the process of ordering a second machine in order to keep up with increasing demand."

Features of the PMSA RE600 block machine include a 2,2 kW twin-shaft vibrator with hydraulically operated mould, tamper, feeder box and pallet feeder. The RE600 is available as either a manually operated machine or automated with a programmable logic controller.

Quintin Booysen, PMSA sales and marketing manager, says the company has a comprehensive stockholding on site to eliminate the associated risks of downtime.
