

PMSA Constructs Cutting-Edge Showroom

The two-storey 700 square metres showroom is earmarked to house sales and marketing offices.

Pan Mixers South Africa (PMSA), the largest supplier of concrete, brick, block and paving making machinery and technology in Africa since 1976, has completed the construction of a state-of-the-art and a cutting-edge showroom almost entirely from concrete in Jet Park, Johannesburg, South Africa.

The two-storey 700 square metres showroom is earmarked to house the sales and marketing offices in order to highlight the endless possibilities that concrete offers in modern day construction, states PMSA marketing and sales manager Quintin Booysen.

The concrete panels used in the construction of the showroom each weigh up to seven tons and this necessitated the company to work closely with contractors to ensure that the necessary quality and precision was met in order to ensure that a world class facility is delivered.

The panels had to be pulled up into the right position so that they can be positioned in such a way that they are not just decorative, but also that they are structural elements of the room.
