

Innovative concrete equipment on display

Pan Mixers South Africa (PMSA) will be exhibiting its IMER concrete batching and mixing equipment technology at bauma Africa.

The company was officially named as the South African distributor for Europe-based IMER in July 2013.

PMSA marketing and sales manager Quintin Booysen said, "The outdoor stand has been designed to be a demonstration area to showcase the capabilities of a comprehensive range of PMSA machinery, including the Fiori self-loading concrete batching vehicle, the automated RE600 concrete brick and block-making machines, in addition to a wide range of HTC floor grinding and polishing machinery and accessories with live polishing and grinding demonstration.

PMSA will also host all of its international suppliers at its indoor stand, in order to provide expert advice and insight to visiting guests," he added.

Looking to the future, Booysen believes that there will be a significant increase in demand for PMSA's concrete equipment and technology across Sub-Saharan Africa, as trade and investment increases across Africa.

"With strong economic growth forecast for Sub-Saharan Africa in particular, PMSA plans to be at the grassroots of that development by supplying all associated concrete equipment, technology and solutions to the various projects through the PMSA Group of Companies," he added.

PMSA will be displaying its comprehensive product range at D 26 and H5 111.
