

## Daily grind of floor preparation is simplified by new product range

PMSA – a leading manufacturer of concrete block, brick and paving machinery – has obtained exclusive distribution rights to a complete range of world-class concrete floor grinding machinery through its newly-established company, Galileo Trading.

**G**alileo national sales manager, Andreas Hasselmoose says, "Galileo was established to focus on distributing the internationally-recognised range of Swedish-manufactured HTC floor polishing and grinding machines across Southern Africa."

"Galileo now stocks a range of grinding machines to meet the demands of any floor preparation application, ranging from DIY to large industrial projects. HTC's range of eleven different floor grinders covers everything from small domestic areas, to vast open areas measuring thousands of square metres," he explains.

All HTC grinders are adapted for the unique EZchange system – technology that is exclusive to HTC. "The patented EZchange system ensures that the risk of broken and rusty screws is completely eliminated. The system consists of wings for metal-bond and plastic-bond diamond tools that fit onto a metal holder, which can be used for every type of HTC tool in the EZchange system; all it takes is a light tap with a rubber hammer to ensure that the tool is firmly in place, and the machine is ready for work," he continues.

Hasselmoose says the fastest-growing floor type in South Africa is

HTC Superfloor, which is a complete concept for polishing concrete. "The method mechanically refines the concrete surface by removing the top cement paste, and exposes the underlying stronger concrete," he explains.

"The existing concrete is then ground and polished with HTC's effective range of machinery and tools, resulting in a floor with a completely flat surface with high qualities – both functional and aesthetic."

HTC Superfloor is ideal for all environments, and can be used in applications ranging from industrial and consumable storage, to shopping malls and educational facilities.

Hasselmoose says the introduction of the HTC range of grinding tools gives Galileo an all-in-one-solution offering for concrete floor preparation, as the company already stocks the HTC Twister range of floor pads, which offer a green alternative to toxic chemical detergents when it comes to maintaining floor surfaces – by making use of grinding discs coated with microscopic diamonds. ■
