

## International Product Fair back by popular demand

September 15 and 16 are red-letter days. PMSA's second International Product Fair will be held at the company's factory in Graniet Street, Jet Park, Boksburg, and will showcase the finest equipment and technology available to the building sector.

PMSA director Walter Ebeling says: "As market leaders, we enjoy bringing the latest technologies to our customers. Last year's fair was a resounding success, and this year's event will be bigger and better, with additional exhibitors, product launches and demonstrations.

Guest speaker Clem Sunter, world-renowned global strategist and scenario-planner, will discuss the future of the South African construction industry. A distinguished author, Sunter has been voted the speaker who has made the most significant contribution to, and impact on, best practice and business in South Africa.

Numerous experts will offer advice, including Jean Tresfon, whose presentation will cover 'green' building, and how the concrete industry can capitalise on this growing trend. The Cement and Concrete Institute will also discuss sustainability in the concrete industry.

The Fair will feature a range of new products, including the Fiori self-loading concrete mixer that has an on-board system

to weigh aggregates before loading them into the mixer. The mixer also calculates whether the material is mixed, and is at the required slump – making it the only self-loading mixer in the world capable of producing CE quality concrete.

The fair will show the world's first Wi-Fi moisture sensor, German-engineered and designed for conditions where wiring is impossible. It allows the moisture content of readymix to be measured from within a mixing drum.

The Swedish HTC range of concrete floor preparation machinery, and the TWISTER environmentally-friendly floor cleaning system, will also be launched and demonstrated.

PMSA will introduce a topping feed attachment for the RE600 block making machine, the latest PMSA software, control systems and remote access SCADA solutions for plant reporting and fault finding. Additional products on display:

- Sermac concrete pumps from Italy
- Wil-el-Mil three-stage rotary press machine
- Finke Universal Powder Pigments Dosing system
- I brick soil brick-making machines
- BFS wet cast and pipe-making machinery. ■
