

POLISHED CONCRETE

Ideal for retail flooring

The HTC Superfloor system – which is marketed in South Africa by Superb Flooring Systems who are part of the PMSA group of companies– is described as a revolutionary flooring concept with a technique that makes an existing or newly installed concrete more hardwearing by exposing the stronger concrete beneath. HTC Superfloor is more than just a polished concrete floor.

The technique is as simple as it is ingenious. HTC's machines and diamond tools grind and polish concrete floors to remove the surface paste and expose the stronger concrete beneath. The result is a stronger, more durable, shiny and beautiful polished concrete floor – ideal for retail and similar applications.

HTC Superfloor is claimed to have a lower carbon footprint and in certain cases uses as much as 30 times less energy than some flooring solutions – together with a 50% lower lifecycle cost; has an infinite lifespan with HTC's Twister maintenance; is slip-proof even when the floor is wet; provides the highest level of fire safety; easy to clean and aesthetically appealing.

Also, because the floor surface is perfectly

smooth with HTC Superfloor, machinery and vehicles enjoy a minimum of vibration in use.

HTC provides a complete range of floor grinding machines, appreciated by thousands of customers all over the world. These grinding machines are available in different sizes and versions depending on the needs and demands of the customer.

As a leading manufacturer and supplier of floor grinding equipment HTC has an extremely large range of floor grinding machines, with floor grinders that cover everything from edge grinding to grinding of huge areas of thousands of square metres.

The machines are just as effective for floor preparation as they are during floor polishing. Combined with HTC's dust extractors and diamond tools HTC and PMSA can offer a complete system which guarantees that the job is finished with the best result and economy. ■
