

X-TECH STONEFLOW DECORATIVE SCREED

TAL X-Calibur is introducing a newly developed industrial grade, rapid-setting and self-smoothing decorative screed called X-Tech StoneFlow.

Polished, decorative and seamless concrete floor solutions are in high demand, however Terrazzo floors can take up to 28 days to cure before grinding and polishing can commence. TAL X-Calibur joined forces with Rock Solid Flooring and HTC polishers to develop and introduce a revolutionary new flooring system throughout South Africa. HTC polishers are marketed through

Superb Flooring Systems, which is part of the PMSA Group.

X-Tech StoneFlow is a cement based rapid-setting, self-smoothing, shrinkage compensated and heavy duty decorative industrial screeding compound available in varying combinations of base colours and aggregate finishes.

The product allows specifiers and designers to create a custom floor as they can select the specific background colour they prefer and several aggregates, including marble and granite chips. ■
