

HIGHLIGHTING SUPERFLOOR PROJECT

One of the largest indoor concrete floor polishing projects in South Africa to date – 30 000m² – is currently being undertaken in Johannesburg by Platinum Concrete Solutions (PCS), making use of the HTC Superfloor concept.

PCS Managing Director Gershuan Ramlah states that in order to complete this project to the highest standard PCS is making use of HTC Superfloor, a revolutionary flooring concept that uses grinding and polishing techniques to create a strong and hardwearing concrete floor.

The HTC Superfloor concept, which utilises internationally recognised HTC floor grinding and polishing machinery, is exclusively available locally through Superb Flooring Systems – a subsidiary of the Pan Mixers South Africa (PMSA) Group of Companies.

PMSA sales and marketing manager Quintin Booysen explains that the HTC machines and diamond tools grind and polish concrete floors,

thereby removing the surface paste and exposing the stronger concrete underneath.

“HTC Superfloor offers an easy-to-clean and durable flooring solution,” says Quintin. “Dirty, grey concrete floors are transformed into brilliant, easy-to-clean, environmentally friendly and durable polished surfaces. This results in a stronger, more durable, shiny and beautifully polished concrete floor.”

Gershuan believes that the polished concrete market in South Africa is set to achieve measurable growth within the next two years. “Polished concrete is poised to be a massive market in South Africa, and has the potential to set the industry standard for flooring,” he concludes. “As the market grows, PCS intends to open offices in Cape Town and Durban, as well as expand in terms of staff and machinery.” ■
