

**Concrete Equipment
Solutions and Technology**

ProSeal™ & ProSeal Plus™

TECHNICAL SPECIFICATION SHEET:

THE SEALING SOLUTION FOR WEATHERING, STAINING AND EFFLORESCENCE PROTECTION OF CONCRETE PRODUCTS

ProSeal is an environmentally friendly, aqueous, 100% solvent-free polymer dispersion. Concrete surfaces treated with this product possess a sealer which reduces the penetration of external impurities and the formation of efflorescence.

FEATURES AND BENEFITS

ProSeal™ can be applied to fresh and dry finished surfaces (such as sand-blasted, ground, washed or polished surfaces). If applied on the dry side, infrared heaters are required. The surface must be free of dust, loose particles, grease, oil and other impurities that could interfere with a bond forming between the sealer and the concrete surface.

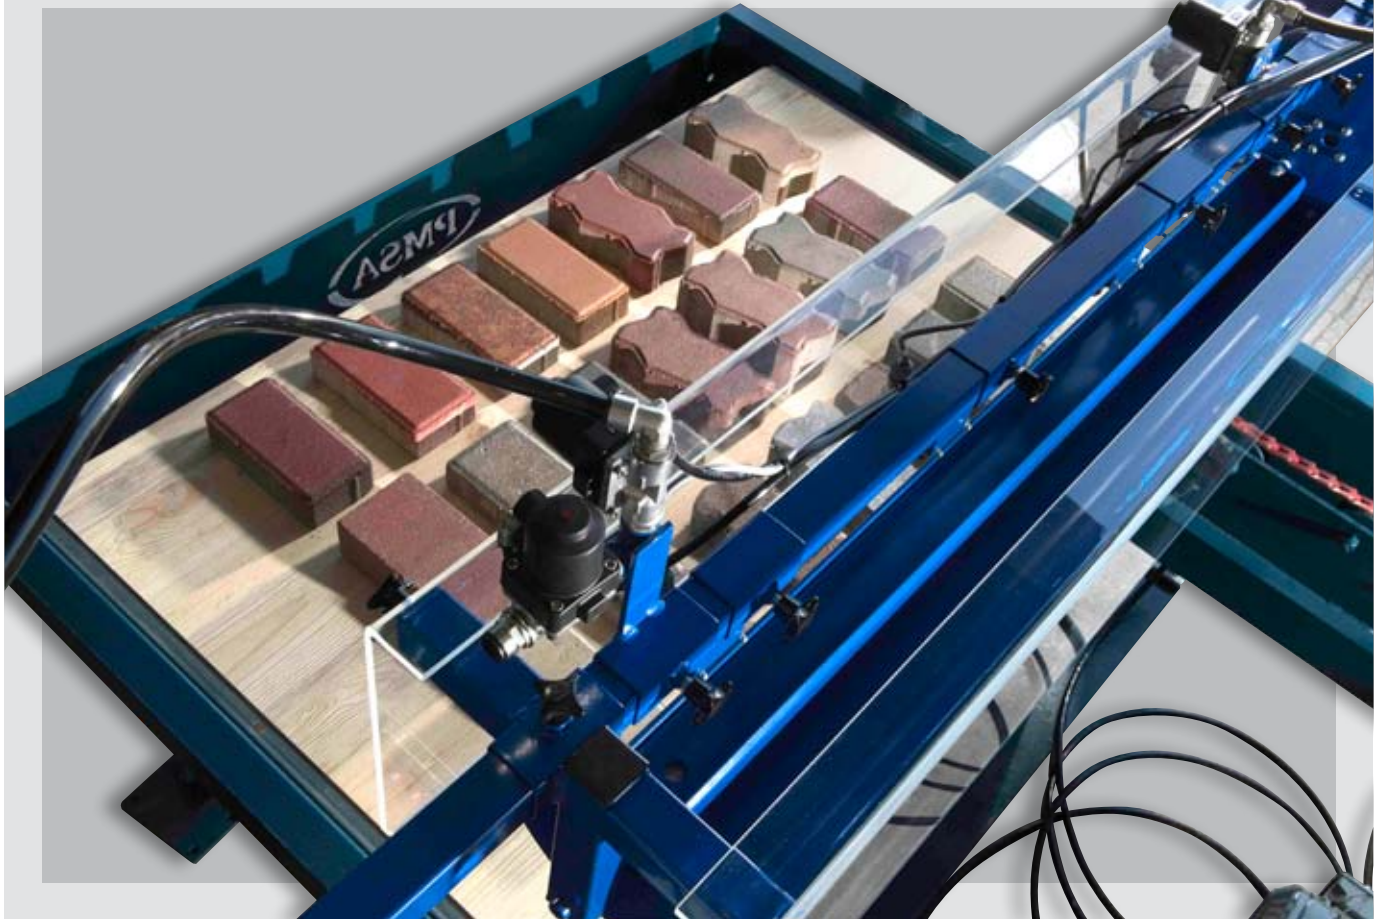

The treated surfaces are protected against dirt build-up, oil stains, mud, hail and environmental pollution. **ProSeal™** and **ProSeal Plus™** will also improve the colour intensity and marketability of concrete products.

ProSeal™ and **ProSeal Plus™** should be evenly applied to a surface using the SPA spraying system.

SPA SPRAYING SYSTEM:

- For wet or cured products.
- Easy integration into the production board handling system.
- Precisely adjustable application quantity ensures efficient use of the sealant.
- Short installation time.
- Adaptable to various production board sizes.
- Uniform sealer application.
- Sturdy and reliably built.
- Low maintenance.
- Requires infrared heaters when used on dry products.

Supplied by PMSA in South Africa. Our professional and experienced technical support team will provide you with the assistance you require. Our comprehensive spare parts facility enables us to provide immediate dispatch globally. E&OE. [Rev_2_2021]
