

PMSA – new technology revelation

Pan Mixers South Africa (PMSA) will be exhibiting internationally recognised IMER concrete batching and mixing equipment technology at the bauma Africa Trade Fair in September.

PMSA VB1X mobile plant.

PMSA marketing and sales manager Quintin Booyesen points out that the company was officially named as the South African distributor for Europe-based IMER in July. “The most notable advantage of this new partnership is the fact IMER will be bringing new technological advancements to the PMSA range of concrete batching plants, which will enable local customers to purchase world-class mixing and batching plants that are capable of producing up to 300m³ of concrete per hour.”

Booyesen reveals that PMSA has put significant preparation into its outdoor and indoor exhibition space, which boasts a total exhibition area of 300m². “The outdoor stand has been designed to be a demonstration area to showcase the capabilities of a range of PMSA machinery, including: the

Fiori self-loading concrete batching vehicle and the automated RE600 concrete brick and block-making machines, in addition to a wide range of HTC floor-grinding and polishing machinery and accessories with live polishing and grinding demonstration. PMSA will also host all of its international suppliers at its indoor stand, in order to provide expert advice and insight to visiting guests,” he continues.

The bauma Trade Fair is usually hosted in Germany, and is renowned for being the largest and most influential construction expo worldwide. This is the first time that the event is being hosted in Africa, and it will bring together more than 500 exhibitors and 15 000 visitors to the 60 000m² exhibition area located at the Gallagher Convention Centre in Midrand. ■
